Hatmill

Our end-to-end net zero offering supports logistics, warehousing and supply chain organisations in achieving their sustainability goals

1 Sustainable design and build
- Embodied, operational and whole-life carbon impact assessments for new warehouses and buildings
- Support in achieving globally recognised standards (BREAMM) and the UK Green Business Council framework for net zero buildings

2 Measurement and target setting
- Operational and supply chain emissions profile assessment, measuring and monitoring for Scopes 1, 2 and 3 emissions
- Short and long-term target setting, and approval of net zero targets linked to Science-Based Targets (SBTs)

3 Net zero strategy and delivery
- Develop a comprehensive net zero strategy and action plan with specific reduction initiatives throughout the supply chain
- Deploy a net zero platform to measure, track progress and report against sustainability goals

4 Scope 3 specialism
- Identify, assess, and manage Scope 3 emissions by developing a comprehensive inventory of Scope 3-related emissions
- Promote supplier collaboration to adopt more sustainable practices by targeting spending data and associated emissions

5 Sustainable transport solutions
- Assessment of current transportation practices and emissions to develop a tailored emissions reduction strategy
- Identifying and implementing relevant technology solutions that reduce transport emissions and improve efficiency

6 Sustainable warehouse solutions
- Detailed assessment of current operations, energy usage, waste generation, and emissions to form the baseline
- Identify relevant energy-efficient and carbon-reduction technologies and practices, including renewable energy sources

7 Training and engagement
- Assist in developing employee training programs that promote sustainable practices and raise awareness about sustainability goals
- Foster a culture of sustainability through employee engagement programs. Create a baseline of climate literacy for all employees

8 Regulations and compliance
- Perform a gap analysis to identify the required remediation between your current practices and the legal requirements
- Ensure compliance with local, national, and international sustainability and environmental regulations

9 Carbon offsetting and mitigation
- Establish a carbon offset program with verified quality offsetting schemes linked to United Nations Sustainable Development Goals
- Demonstrate the effectiveness and overall contribution to the organisations sustainability goals

10 Net zero certification
- Verification process and certification at each stage of the net zero journey confirming meaningful actions towards sustainability goals
- Ongoing support and collaboration. Supporting businesses with their evolution towards a net zero emissions future
