

Our end-to-end net zero offering supports logistics, warehousing and supply chain organisations in achieving their sustainability goals

Sustainable design and build

- Embodied, operational and whole-life carbon impact assessments for new warehouses and buildings
- Support in achieving globally recognised standards (BREEAM) and the UK Green Business Council framework for net zero buildings

Measurement and target setting

- Operational and supply chain emissions profile assessment, measuring and monitoring for Scopes 1, 2 and 3 emissions
- Short and long-term target setting, and approval of net zero targets linked to Science-Based Targets (SBTs)

Net zero strategy and delivery

- Develop a comprehensive net zero strategy and action plan with specific reduction initiatives throughout the supply chain
- Deploy a net zero platform to measure, track progress and report against sustainability goals

Scope 3 specialism

- Identify, assess, and manage Scope 3 emissions by developing a comprehensive inventory of Scope 3-related emissions
- Promote supplier collaboration to adopt more sustainable practices by targeting spending data and associated emissions

Sustainable transport solutions

- Assessment of current transportation practices and emissions to develop a tailored emissions reduction strategy
- Identifying and implementing relevant technology solutions that reduce transport emissions and improve efficiency

Sustainable warehouse solutions

- Detailed assessment of current operations, energy usage, waste generation, and emissions to form the baseline
- Identify relevant energy-efficient and carbon-reduction technologies and practices, including renewable energy sources

Training and engagement

- Assist in developing employee training programs that promote sustainable practices and raise awareness about sustainability goals
- Foster a culture of sustainability through employee engagement programs. Create a baseline of climate literacy for all employees

Regulations and compliance

- Perform a gap analysis to identify the required remediation between your current practices and the legal requirements
- Ensure compliance with local, national, and international sustainability and environmental regulations

Carbon offsetting and mitigation

- Establish a carbon offset program with verified quality offsetting schemes linked to United Nations Sustainable Development Goals
- Demonstrate the effectiveness and overall contribution to the organisations sustainability goals

Net zero certification

- Verification process and certification at each stage of the net zero journey confirming meaningful actions towards sustainability goals
- Ongoing support and collaboration. Supporting businesses with their evolution towards a net zero emissions future
